Köln, 8. April 2003

To whom this may concern.

TÜV Rheinland is respected world-wide for its independent testing and assessment services. Products and Systems are tested for compliance according to various applicable standards including: ISO 9000, CE Marking, EN and DIN.

For Skate Ramps and Rails, TÜV Rheinland tests for compliance with DIN 33943 „Skateboarding Facilities“.

This standard consists of 4 clearly defined sections:

- Construction Requirements
- Safety Requirements
- Design of Skate Ramps and Layout of Skate Parks
- Durability and Quality of Construction Materials

In order to obtain a certification of compliance for a product, testing is carried out on 3 levels:

Product Testing

Quality Assurance concerning:

- Supplier Control
- manufacturing
- Follow-up Inspection
-

Product tests on the field

The product being tested must pass all three levels of testing to obtain certification.
The company may then use the GS (safety) logo for its tested products.

Skate ramps manufactured by Saunaco under the brand name of „Rhino“ have received certification according to the above criteria and may use the GS logo on their products.

In addition to this service, TÜV Rheinland also inspects installed Skate Ramps for continued compliance. During our inspections of RHINO ramps installed in various locations, we have found no deviations even with Skate Ramps that have been in use for several years.

Best regards
